### **Investment Strategy**

The investment seeks to maximize long-term return on capital. The fund employs a "value approach" in making its common stock selections. Under normal market conditions the fund invests at least 80% of its net assets, plus the amount of any borrowings for investment purposes, in securities of small-cap companies. The fund considers small-cap companies to be those issuers that, at the time of initial purchase, have a market capitalization that is within or below the range of companies in the Russell 2000 Index as of the latest reconstitution. The fund may invest in securities of both domestic and foreign issuers. The fund's policy of investing at least 80% of its net assets in small companies may only be changed upon 60 days prior notice to shareholders.

### **Fund Capitalization**

Data as of 12.31.2024

5	Year	Return	& Risk	(FAMFX)
	I Cui	ILC CUITI	C IVISIC	(I AIVII A)

Time Period: 12.31.2019 to 12.31.2024			
	FAM Small <u>Cap Fund</u>	Russell 2000	
Return	10.72%	7.40%	
Sharpe Ratio	0.38	0.20	
Sortino Ratio	0.57	0.30	
Standard Deviation	21.42	24.48	
Alpha	0.34	0.00	
Beta	0.83	1.00	
Tracking Error	2.26	0.00	
R-Squared	90.39	100.00	
Treynor Ratio	9.83	4.86	
Max Drawdown	-30.29	-30.61	

Sharpe Ratio is a risk-adjusted measure calculated by using standard deviation and excess return to determine reward per unit of risk. Sortino Ratio is similar to Sharpe Ratio except it uses downside risk (Downside Deviation) in the denominator. Standard Deviation is a statistical measurement of dispersion about an average, which, for a mutual fund, depicts how widely the returns varied over a certain period of time. Alpha is a measure of the difference between a portfolio's actual returns and its expected performance, given its level of risk as measured by beta. Beta is a measure of systematic risk with respect to a benchmark. Tracking Error is the standard deviation of the difference between the returns of an investment and its benchmark. R-Squared reflects the percentage of a portfolio's movements that can be explained by movements in its benchmark. Treynor Ratio is a performance metric for determining how much excess return was generated for each unit of risk taken on by a portfolio. Max Drawdown is the peak to trough decline during a specific record period of an investment or fund.

Performance Summary

#### Cumulative Growth of \$10,000 - FAMFX

\$10,000	=	\$38,096
on 03.01.2012		as of 12.31.2024

Cumulative performance of a hypothetical \$10,000 investment in FAM Small Cap Fund assumes all dividends and capital gains were reinvested. The returns are net of the Fund's expenses, but do not reflect the payment of any brokerage commissions or brokerage costs incurred as a result of buying or selling FAM Small Cap Fund shares or trading FAM Small Cap Fund shares on an exchange and do not reflect the deduction of taxes to which an investor would be subject as a result of owning or selling shares of FAM Small Cap Fund. If they did, the returns would be lower than those shown

\*Institutional Class shares became available for sale on January 1, 2017. For performance prior to that date, this table includes the actual performance of the Fund's Investor Class (and uses the Fund's Investor Class' actual expenses), without adjustment. The performance results shown for the periods prior to January 1, 2017, the date of commencement of operations for Institutional Shares, are for the Investor Shares, which are subject to higher fees due to differences in the shareholder administrative services fees and certain other fees paid by each class. Institutional Shares and Investor Shares would have substantially similar performance results because the shares of each class are invested in the same portfolio securities of the Fund. Because of the difference in the level of fees paid by Investor Shares, the returns for the Investor Shares may be lower than the returns of the Institutional Shares.

Past performance is not indicative of future results, current performance may be higher or lower than the performance date quoted. Investment returns may fluctuate; the value of your investment upon redemption may be more or less than the initial amount invested. All returns are net of expenses. Please consider a fund's investment objectives, risks, charges and expenses carefully before investing. The FAM Funds prospectus or summary prospectus contains this and other important information about the FAM Small Cap Fund and should be read carefully before you invest or send money. The principal risks of investing in the fund are: stock market risk (stocks fluctuate in response to the activities of individual companies and to general stock market and economic conditions), stock selection risk (Fenimore utilizes a value approach to stock selection and there is risk that the stocks selected may not realize their intrinsic value, or their price may go down over time), and small cap risk (prices of small cap companies can fluctuate more than the stocks of larger companies and may not correspond to changes in the stock market in general).

To obtain a prospectus or summary prospectus and performance data that is current to the most recent month-end for each fund as well as other information on the FAM Small Cap Fund, please go to fenimoreasset.com or call (800) 932-3271.
